

SOFTWARE PROGRAMMER

Position Requirements: Knowledge of object oriented programming languages, XML and Workflow technologies necessary. Experience with GUI design and development using Java, VB, Oracle, SQL, DHTML, XML, HTML, JavaScript, Flash, MS Access Unix shell scripting, Tomcat, Apache, Solaris or Linux are highly desirable. Strong interpersonal, analytical, communication skills necessary as well as the ability to multitask and work on tight time schedules. Some work is done in a UNIX environment, so knowledge of that helps.

Programming & developing for new and existing web-based software. Involved in all aspects of the development to include project overviews, development, implementation, testing and customer service. Position is very deadline driven. Work is on your own as well as with a team.

Salary based on ability
